A free portfolio cost check, ready in minutes

How the Portfolio Cost Engine would work for Safe Capital

Briefing for Massimo · November 2026

Concept and demo · every figure in this deck is synthetic

Clients rarely know what their portfolio really costs

> *“My bank charges me about half a percent… I think. I’ve never added it all up.”*

Typical prospect remark (illustrative, not a real quote)

The costs are spread over many documents, and some are never shown as a charge

Bank fee statement
management and custody debits

Mandate & tariff
rates, tiers, minimums, VAT

Trades & FX
brokerage, third-party, FX margin

Fund prices
ongoing charges taken inside the price

Structured notes
margins built into the issue price

Insurance wrappers
policy fees on top of the funds

Our offer: an evidence-based cost check, free for the prospect

1. The client hands over documents

Statements, fee reports and contracts from one or more banks: PDF, scans or Excel.

2. A cost picture within minutes

The engine reads the documents and builds a first draft of the annual all-in cost. An analyst checks it.

3. A fair comparison with Safe Capital

Same holdings, Safe Capital's fee plus the custodian bank's fees, switching costs included. On one page.

Three rules we never break: every number links to its source page · a missing cost is never counted as zero · no saving is claimed unless the service is comparable

Five steps from a pile of documents to a client-ready report

Upload

Files go into a private, encrypted workspace for this prospect

Read & check

Positions, ISINs and fees are extracted, each tied to its page

Find product costs

Official fund documents give each fund's ongoing cost

Calculate

Annual cost per layer: proven, estimated, missing

Compare & report

Safe Capital scenario, payback, one-page report

A Safe Capital analyst checks flagged values after step 2 and approves the report after step 5. Nothing reaches the client without a person signing it off.

What the client brings: three essentials, the rest makes it sharper

Essential

Holdings / portfolio valuation

per bank, recent date

Fees charged in the last 12 months

fee statement or annual cost report

Mandate or advisory contract

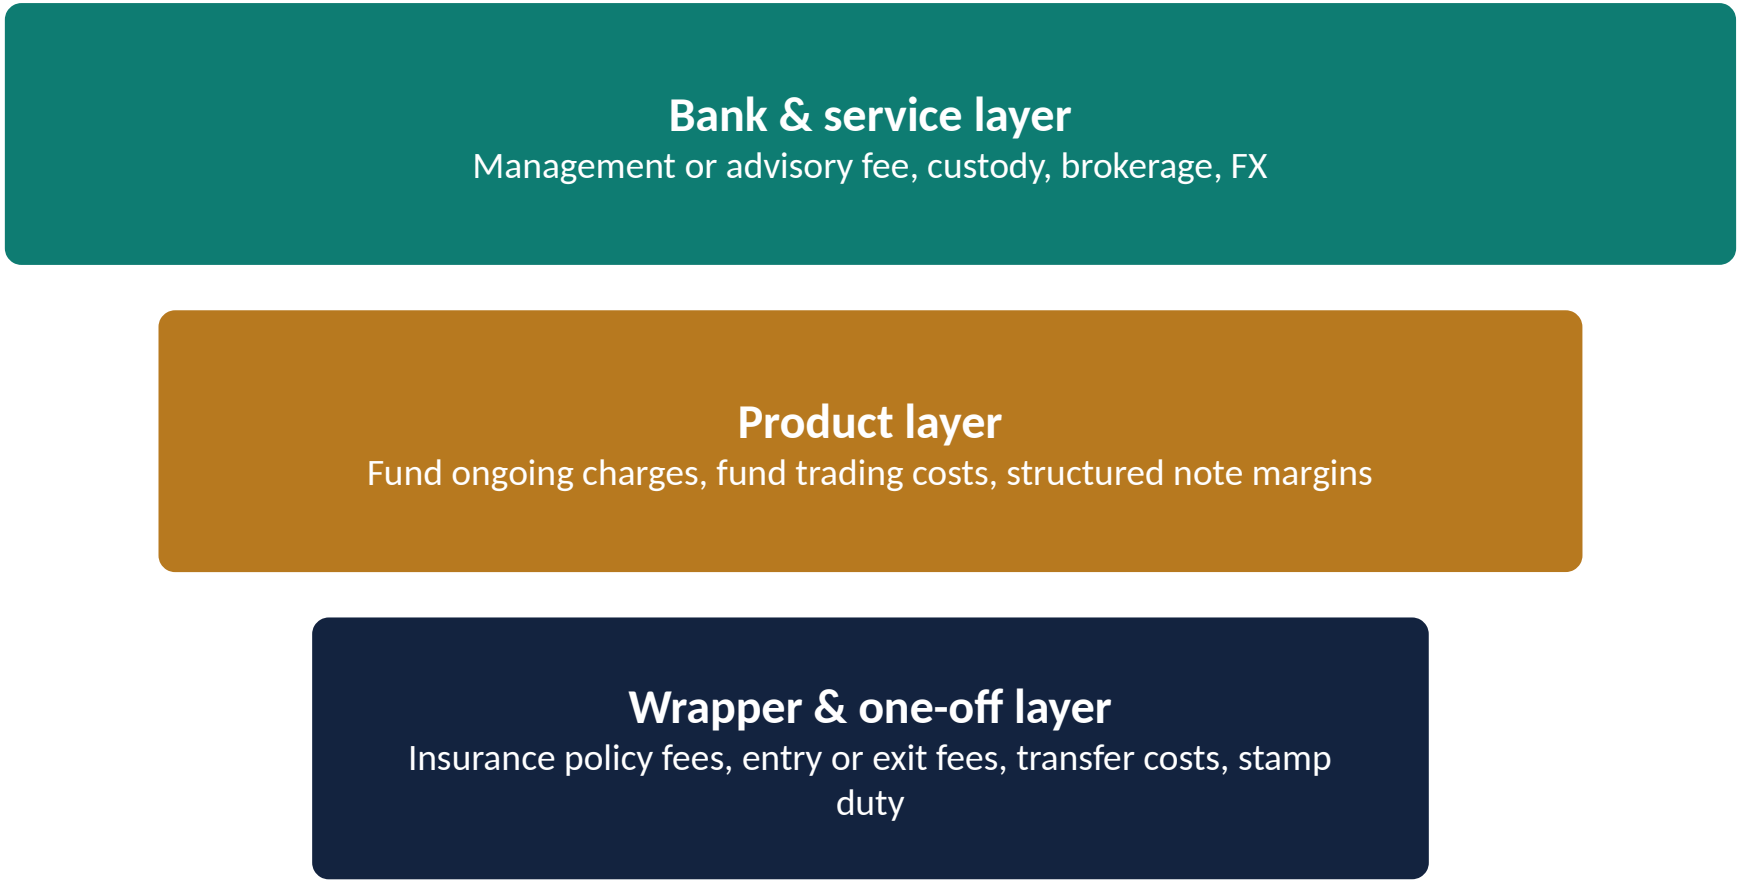

the agreed rates and what they cover

Helpful

- Custody and trading tariff
- Transaction list (12 months)
- FX confirmations
- Rebate / retrocession disclosure
- Structured product termsheets
- Insurance policy, if funds sit in a wrapper

Accepted: PDF, scans or phone photos, Excel, CSV. If something is missing, the engine drafts the request for the client.

Costs sit in three layers, and only the top one shows up as a debit

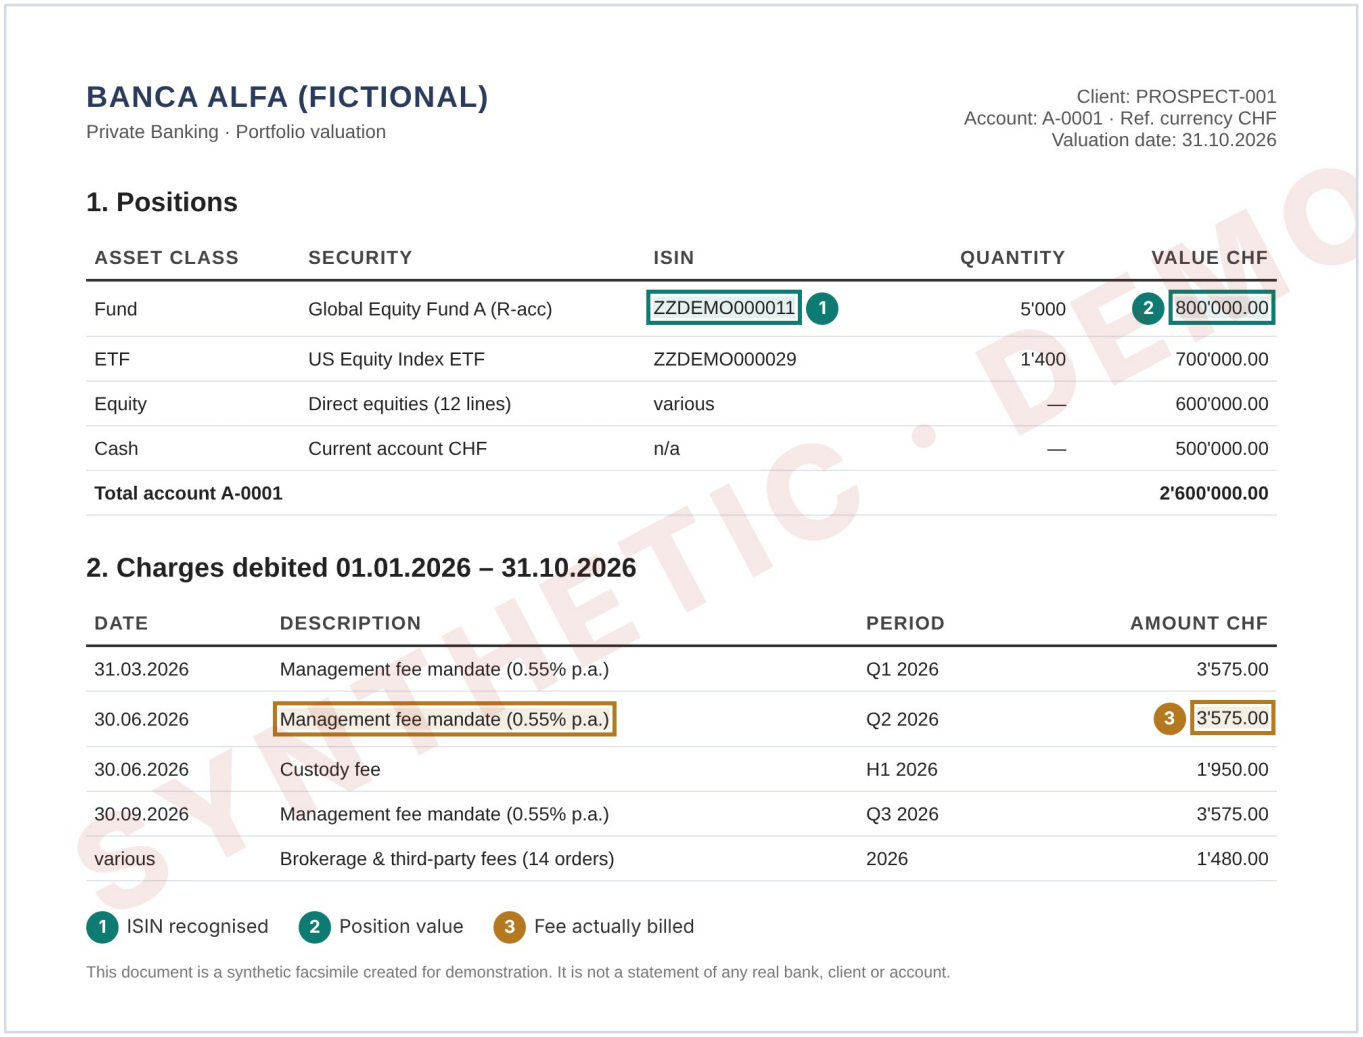

Visible: debited from the account

Hidden: taken inside the product price

Occasional or contract-specific

The product layer is the one most clients never see, and often the largest after the management fee.

Every number keeps a link to the page it came from

BANCA ALFA (FICTIONAL)
Private Banking · Portfolio valuation

Client: PROSPECT-001
Account: A-0001 · Ref. currency CHF
Valuation date: 31.10.2026

1. Positions

ASSET CLASS	SECURITY	ISIN	QUANTITY	VALUE CHF
Fund	Global Equity Fund A (R-acc)	ZZDEMO000011 ①	5'000	② 800'000.00
ETF	US Equity Index ETF	ZZDEMO000029	1'400	700'000.00
Equity	Direct equities (12 lines)	various	—	600'000.00
Cash	Current account CHF	n/a	—	500'000.00
Total account A-0001				**2'600'000.00**

2. Charges debited 01.01.2026 – 31.10.2026

DATE	DESCRIPTION	PERIOD	AMOUNT CHF
31.03.2026	Management fee mandate (0.55% p.a.)	Q1 2026	3'575.00
30.06.2026	Management fee mandate (0.55% p.a.)	Q2 2026	③ 3'575.00
30.06.2026	Custody fee	H1 2026	1'950.00
30.09.2026	Management fee mandate (0.55% p.a.)	Q3 2026	3'575.00
various	Brokerage & third-party fees (14 orders)	2026	1'480.00

① ISIN recognised ② Position value ③ Fee actually billed

This document is a synthetic facsimile created for demonstration. It is not a statement of any real bank, client or account.

SYNTHETIC · DEMO

1 Security recognised

The ISIN identifies the exact fund and share class.

2 Position value

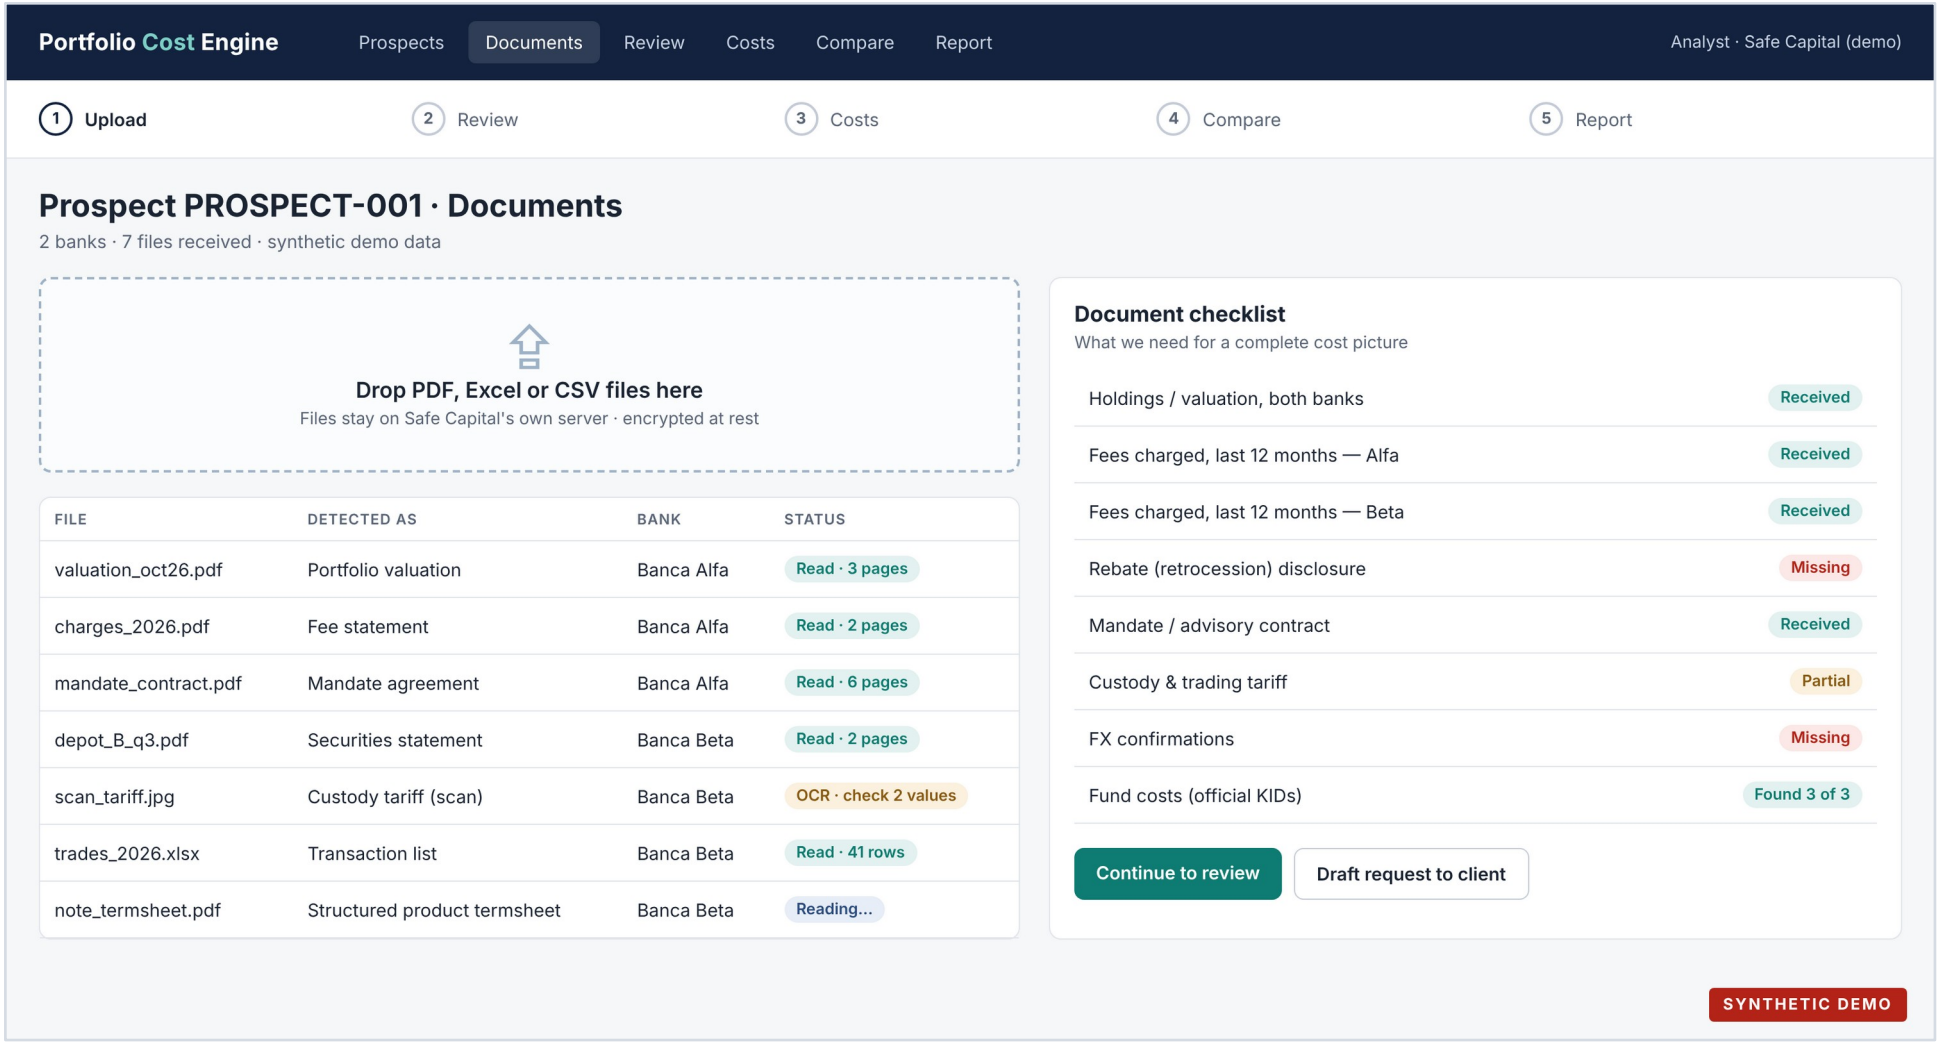

Used to turn a fund's cost percentage into francs.

3 Fee actually billed

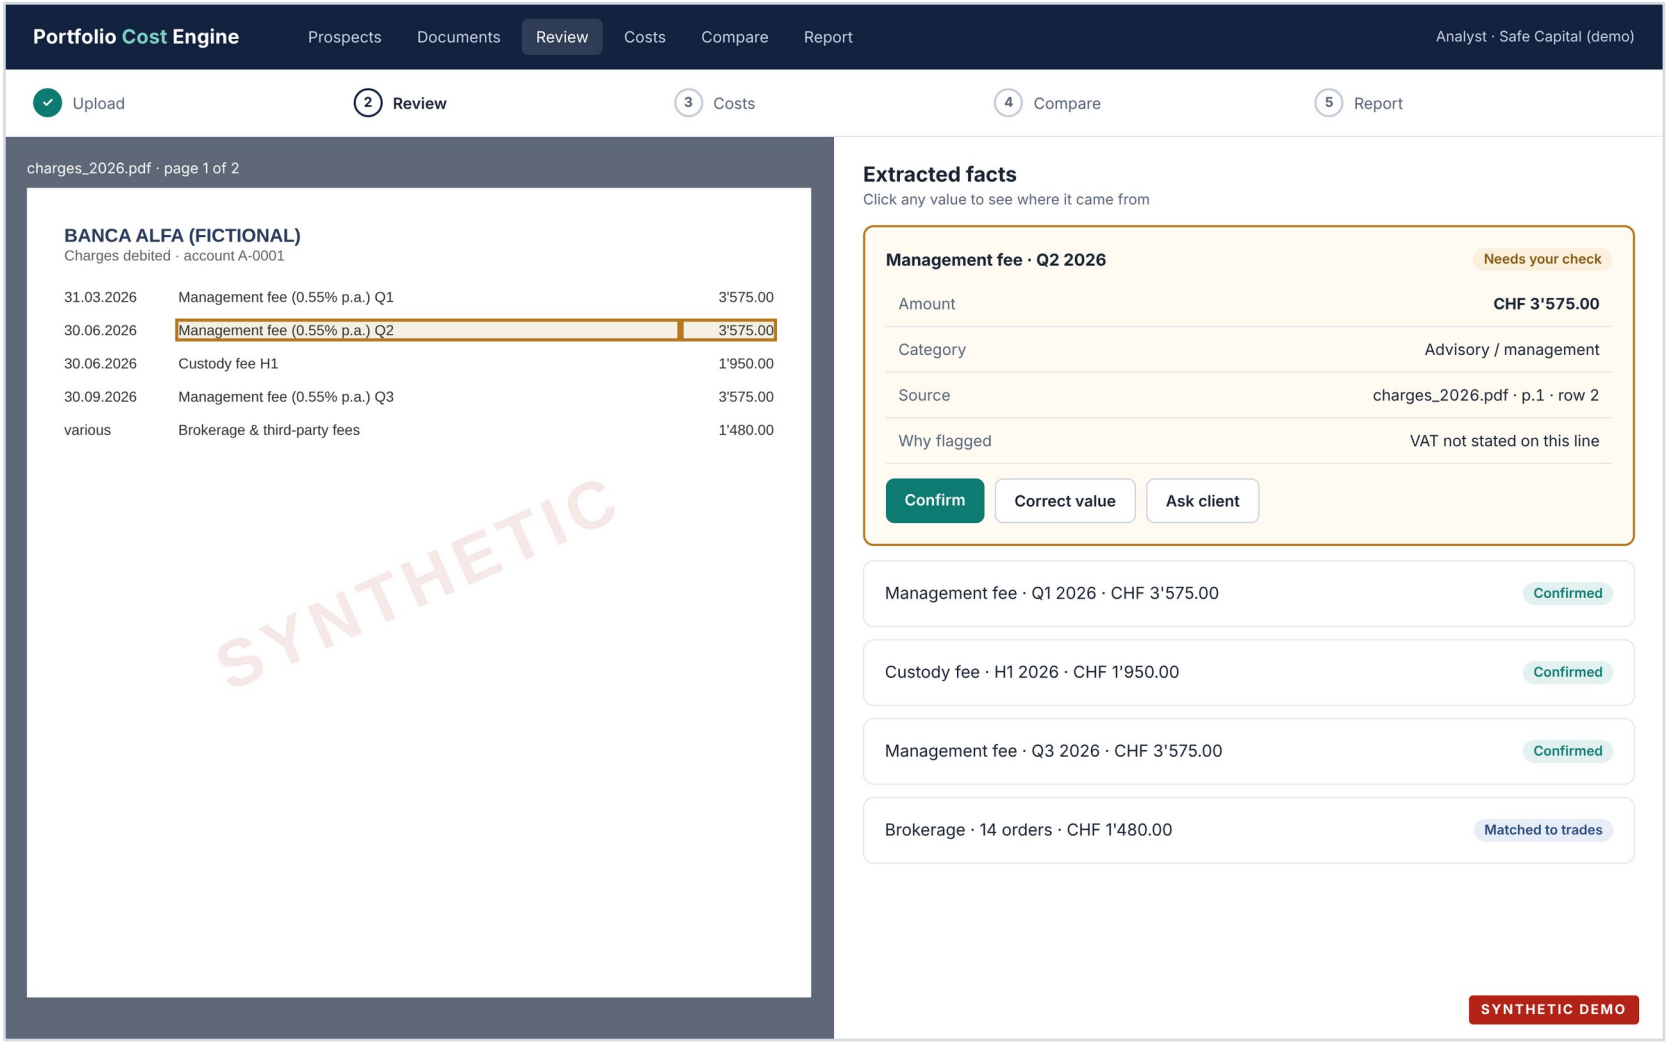

Proven cost: date, period and amount kept with the page reference.

Example is a synthetic facsimile. Real bank layouts differ by bank and language; each new layout is tested before use.

Step 1 · Upload: the checklist shows at once what is still missing

Step 2 · Review: the analyst confirms values next to the original page

Fund costs come from the official KID of the exact share class

ISIN on the statement

ZZDEMO000011

Exact share class

Global Equity Fund A, R-acc

Official KID / factsheet

issuer's document, dated

Ongoing cost

1.08% per year

Worked example (synthetic)

- Ongoing charges 1.08%, of which management fee 0.75%
- The 0.75% is already inside the 1.08%: counted once
- **CHF 800'000 × 1.08% = CHF 8'640 per year, marked estimated**

Why the exact class matters

The same fund can have several share classes with different costs. If the class can't be confirmed, the engine marks the cost as missing instead of guessing.

Each cost is counted once, and a missing cost is never treated as zero

Counted once

- A fund's management fee is part of its ongoing charges
- An all-in fee may already include custody
- A KID's total is the sum of its parts, not an extra
- A rebate counts only if it was actually paid back

Missing ≠ zero

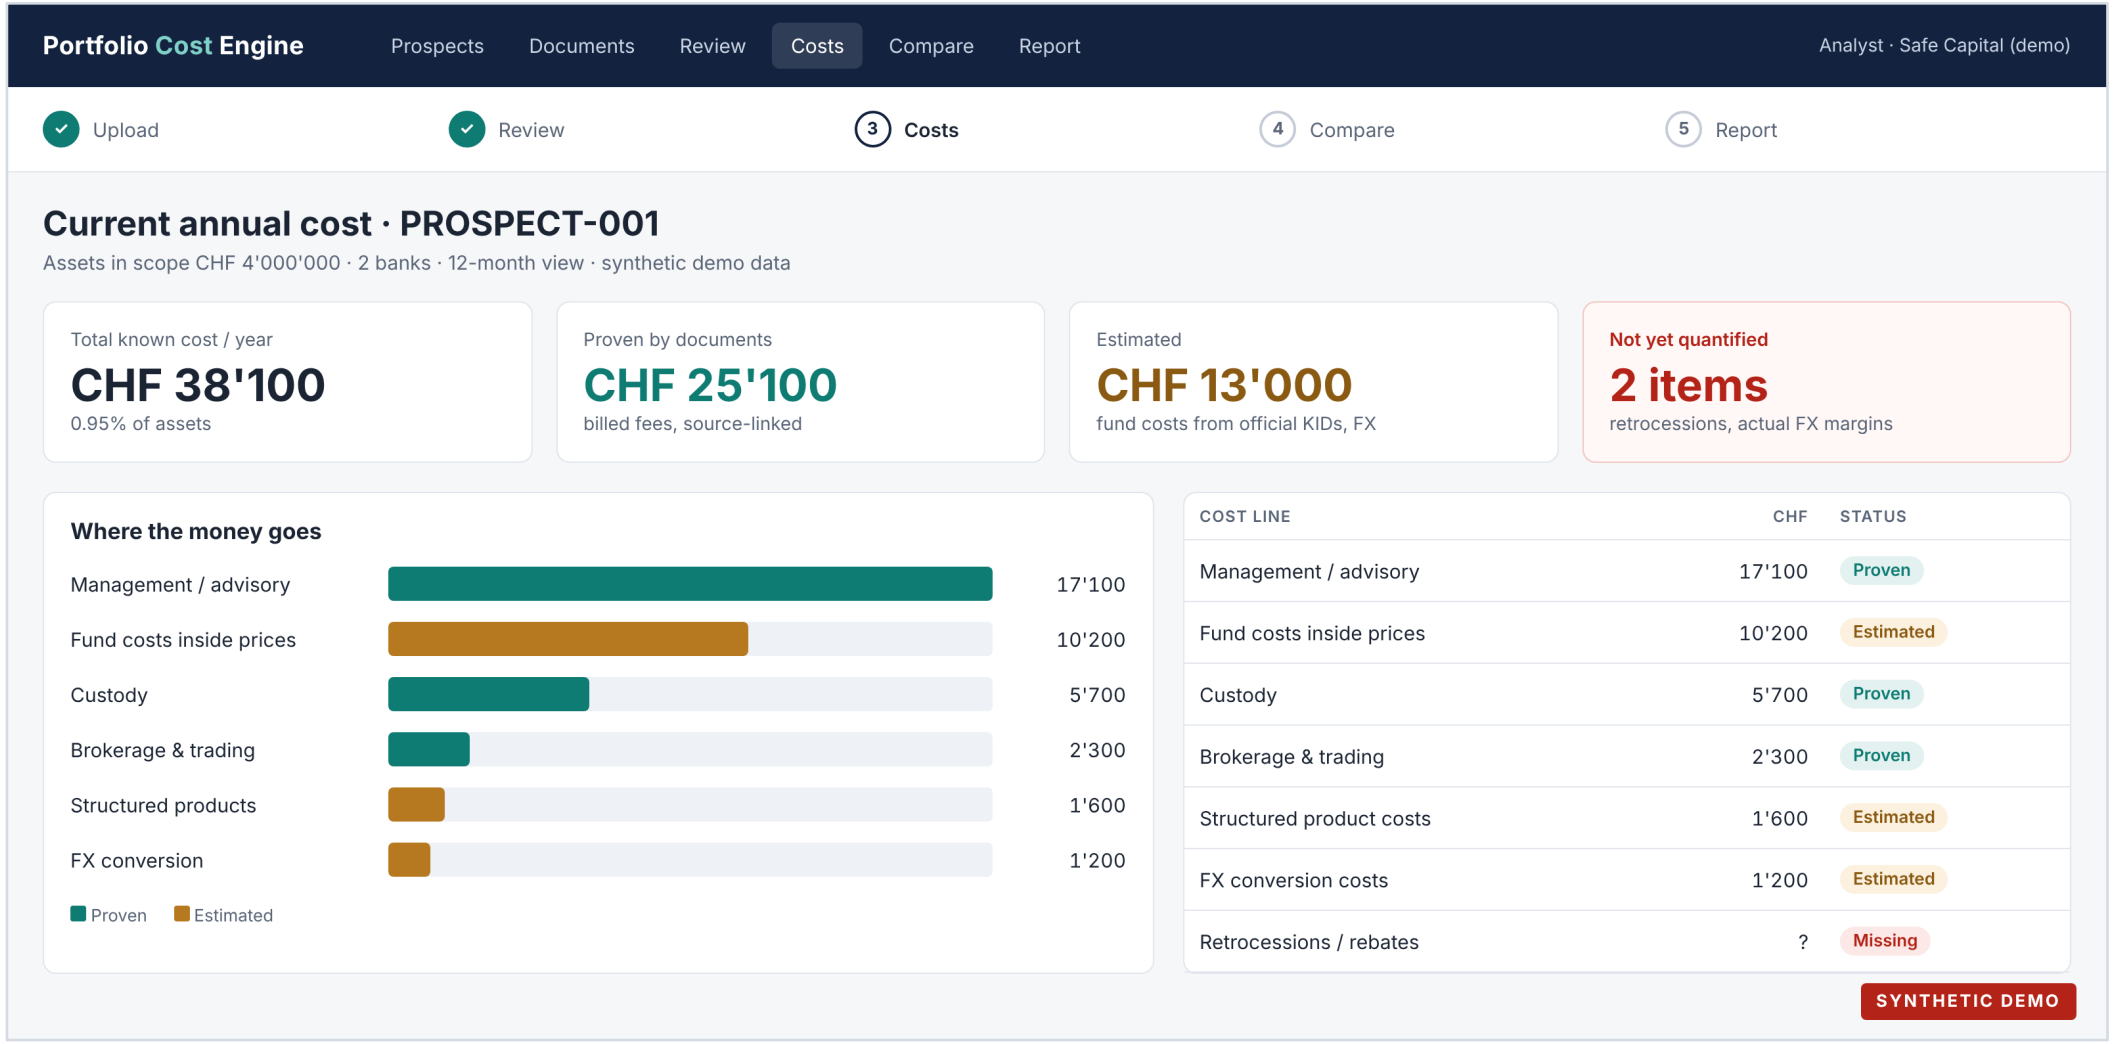

Gaps are shown in red, and the engine drafts the request:

Please ask Banca Beta for:

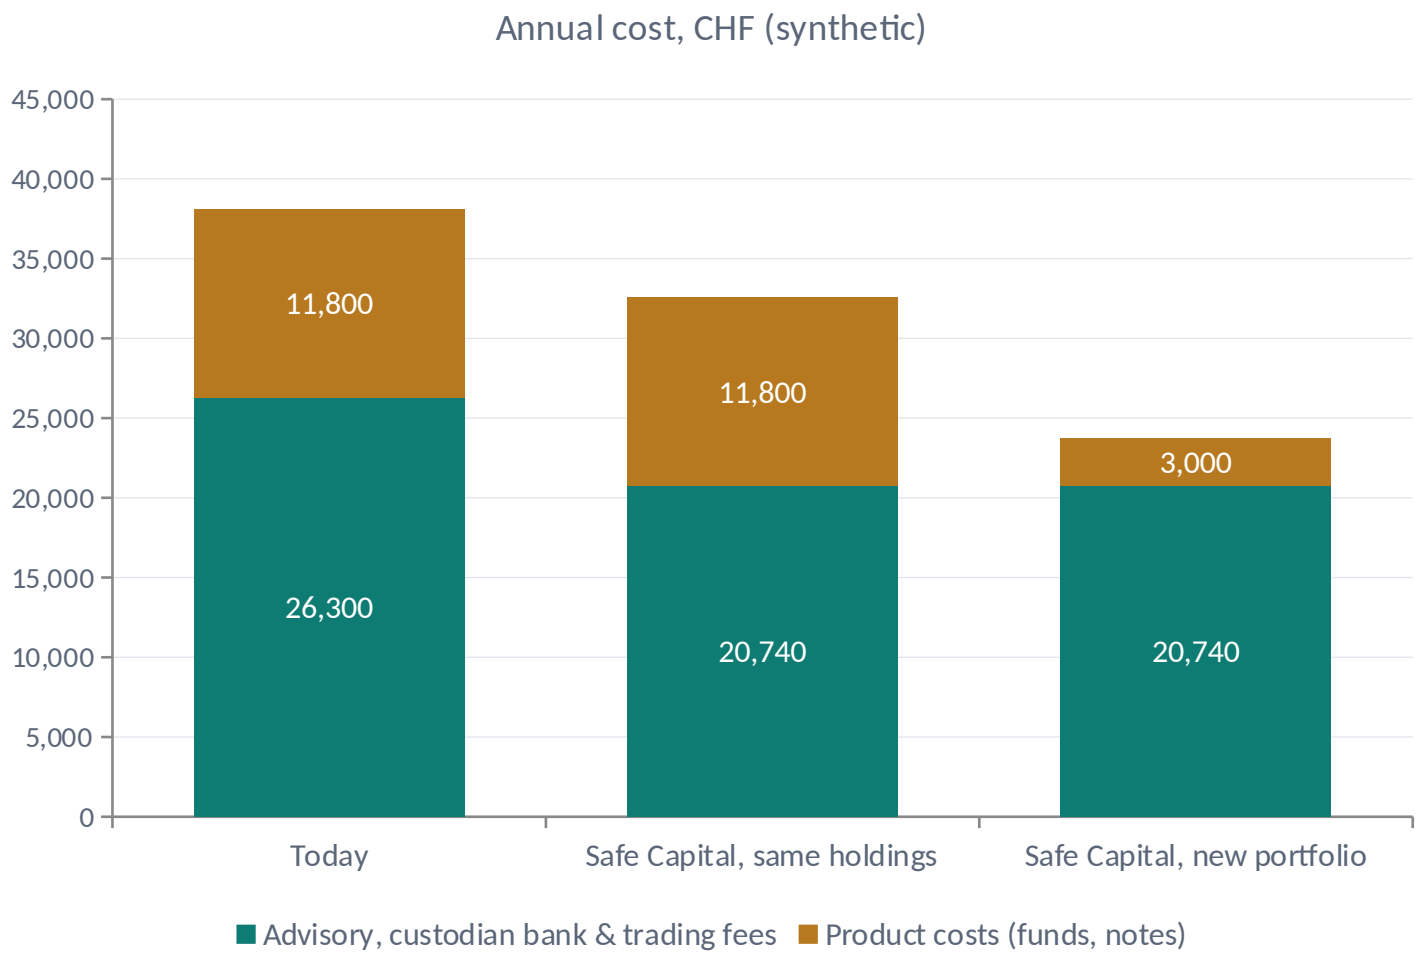

- Rebate (retrocession) disclosure 2026
- FX confirmations, last 12 months

Why: without them, FX and rebates stay estimated, so the saving shown is a range, not a firm figure.

Step 3 · Costs: the full picture, split into proven and estimated

Step 4 · Compare: same holdings first, a new portfolio kept apart

Today

CHF 38'100 0.95%

Same holdings

CHF 32'540 0.81%

New portfolio

CHF 23'740 0.59%

Safe Capital columns include the custodian bank's fees: assets stay at a bank, Safe Capital manages them. The new-portfolio case changes products and risk, so it is not a like-for-like saving.

Year one: switching costs are included, so the payback is honest

	Same holdings	New portfolio
Annual difference	CHF 5'560	CHF 14'360
One-off switching costs	– CHF 8'000	– CHF 8'000
Net result in year one	**– CHF 2'440**	**+ CHF 6'360**
Payback	about 17 months	about 7 months

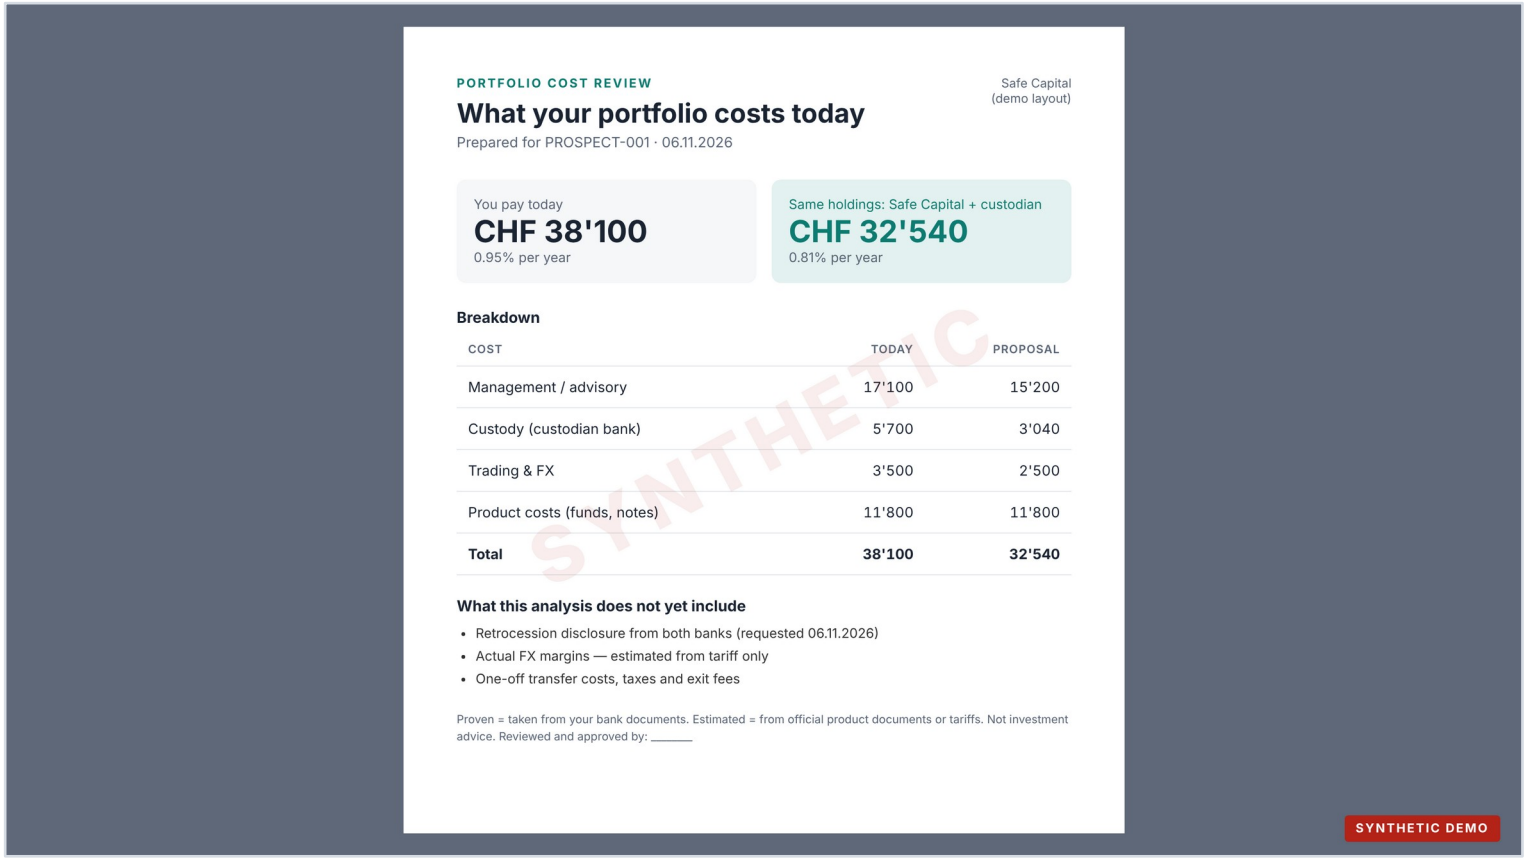

Switching costs (transfer, exit, taxes) come from the banks' quotes; here they are a synthetic placeholder. VAT on fees depends on the client's domicile and is applied per client.

Why show a negative year one?

Because a client will find out anyway. Showing the switching cost and the payback period up front makes the recommendation credible, and the saving from year two onward speaks for itself.

Step 5 · Report: one page for the client, the margin stays internal

PORTFOLIO COST REVIEW

Safe Capital
(demo layout)

What your portfolio costs today

Prepared for PROSPECT-001 · 06.11.2026

You pay today
CHF 38'100
0.95% per year

Same holdings: Safe Capital + custodian
CHF 32'540
0.81% per year

Breakdown

COST	TODAY	PROPOSAL
Management / advisory	17'100	15'200
Custody (custodian bank)	5'700	3'040
Trading & FX	3'500	2'500
Product costs (funds, notes)	11'800	11'800
Total	**38'100**	**32'540**

SYNTHETIC

What this analysis does not yet include

- Retrocession disclosure from both banks (requested 06.11.2026)
- Actual FX margins — estimated from tariff only
- One-off transfer costs, taxes and exit fees

Proven = taken from your bank documents. Estimated = from official product documents or tariffs. Not investment advice. Reviewed and approved by: _____

SYNTHETIC DEMO

On the page

Today vs Safe Capital, the breakdown, what is proven and what is estimated

Also on the page

What is still missing, in plain words

Never on the page

Safe Capital's internal margin and profitability view

Before it leaves

An approver signs it off; the version is frozen

Where it runs: on Safe Capital's own infrastructure by default

A · In the office

One secured computer or server at Safe Capital. Simplest for a pilot: documents never leave the building.

Recommended for the pilot

B · Swiss private hosting

A dedicated server with a Swiss provider under a data-processing contract. For several users and offices.

Option for production

C · External AI services

Only for hard-to-read pages, only with explicit approval, and only on redacted excerpts.

Off by default

The only thing that goes to the internet: public fund codes (ISINs) to fetch official product documents. No names, no amounts, no statements.

Client files stay confidential from upload to deletion

Client consent

The client signs a short authorisation before any upload

Only what is needed

Names can be blacked out; costs need no identity

Encrypted

In storage and in transit; separate space per prospect

Named access

Personal logins, two-factor, every view logged

No public AI on raw files

Unless Safe Capital explicitly approves a provider

Deleted on schedule

Retention period agreed up front, then erased

Swiss Federal Act on Data Protection (revised, in force since 1 September 2023) applies. Bank-client confidentiality and outsourcing rules must be checked by Safe Capital's counsel; this slide is not legal advice.

The engine reads and calculates; people make the judgements

Automatic

- Recognise each document and bank
- Extract positions, ISINs and fees
- Fetch official fund cost documents
- Calculate costs in CHF and %
- Flag gaps and draft the client request
- Produce the report draft

A person at Safe Capital

- Enter Safe Capital's and the custodian's fees (once)
- Confirm values the engine flags
- Decide if a comparison is like-for-like
- Approve and sign the client report
- Present it and talk to the client

Delivery in phases, with a real pilot case before any production use

Demo

Working concept on synthetic documents; this deck

Pilot

1–3 anonymised real prospects; measure accuracy and time

Harden

More bank layouts, security review, user logins

Production

Live at Safe Capital after compliance sign-off

Durations are set after the pilot, once we know how many bank formats Safe Capital's prospects bring.

Six decisions we need from Safe Capital to start the pilot

1

One anonymised real case

holdings, 12 months of fees, the contract

2

Safe Capital's pricing

advisory fee, custodian partner and their tariffs

3

Comparison policy

same holdings only, or also a new-portfolio case

4

Where it runs and who sees it

office machine or Swiss hosting; named users

5

Client consent and retention

wording of the authorisation; how long we keep files

6

Legal entity on client material

which Safe Capital entity and licence to cite

Next step: run one anonymised real case

No source, no verified figure · Missing is never zero · No comparable service, no savings claim
